## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: Regarding the prior art made of record: the '468 patent teaches retrograde doped indium wells inside a substrate, under a gate, and between source and drain, but fails to include fluorine dopants in the indium well. The '259 patent teaches retrograde wells using boron and nitrogen, where indium may replace boron, but also fails to include fluorine as a replacement for nitrogen. Yu (US 6,534,373) teaches the combination of fluorine and indium for doping of a substrate, but does not teach high concentrations of indium, a retrograde doping profile, or such a high concentration retrograde doped region as a channel region of a transistor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Response to Arguments***

2. Applicant's arguments, see page 6 of Remarks/Arguments, filed 27 April 2006, with respect to claims 12-25 have been fully considered and are persuasive. The rejection of these claims has been withdrawn.
